

It is our true belief that finding the right solutions to your business' mission makes doing business less challenging.

IFAS

Integrated Logistics Support

IFAS provides full life cycle logistics planning and support for a wide range of complex systems, ensuring that all necessary operational support requirements are met throughout the entire service life.

Services

Logistics Planning

Define a comprehensive logistics support program that details actions required for cradle-to-grave operational support.

Requirements vs. Funding Planning

Correlate logistics requirements with support cost estimates and available funding.

Automation of Logistics Support Processes

Develop automated systems to monitor areas such as provisioning, material tracking, inventory management.

Contractor Data Requirements

Define and evaluate contract deliverables that will enable effective contractor monitoring.

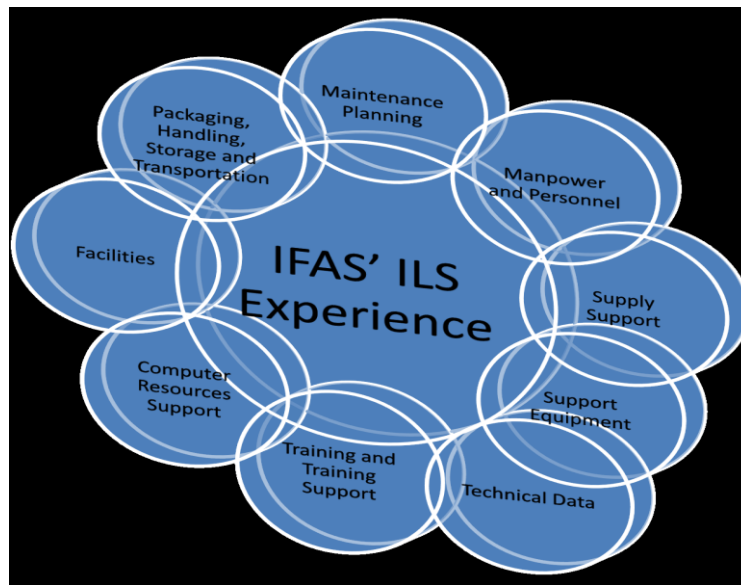

It is our true belief that finding the right solutions to your business' mission makes doing business less challenging.

Benefits

Our employees have a broad range of programs/systems experience encompassing all phases of a system's life cycle. Our employees' efforts have included comprehensive support and planning for the introduction for new systems as well as for systems/equipment already operational. Tasks have included all elements of logistics support.
